

DONKEY WEIGHT ESTIMATOR

To estimate a donkey's weight using the diagram below mark the height and heart girth measurements on the correct axis. Then draw a line between the two. The donkey's weight is indicated by where the line crosses the weight axis. For example, a donkey 104cm tall (a) and with a heart girth 122cm (b) should weigh 181kg (c).

Whilst the weight estimator is an effective tool to estimate weight it's accuracy cannot be guaranteed.
