

CASTRATION IN THE DONKEY

Course code: CLNC111

 2 November 2023 [Read on The Donkey Sanctuary website](#)

This course is recommended for veterinary surgeons and veterinary students who are asked to castrate donkeys and wish to increase their confidence in their recommendations and technique.

Free online course for **professionals only**. Self-paced.

COURSE DETAILS

This course aims to assist practitioners in their ability to safely anaesthetise and castrate a donkey, either in the field or in the theatre. The modules are illustrated by videos taken at the Donkey Sanctuary hospital and describe the techniques and equipment required.

The course is not a substitute for practical experience, and the more specialist surgery via inguinal and laparoscopic route are not described in detail. Recognising and treating complications is an important skill that is addressed.

MODULES

1. Choosing the correct technique to castrate a donkey
2. How to perform a scrotal castration
3. The inguinal and cryptorchid castration

4. Complications of castration
